

Psychosis, ED and OCD Study

Principal Investigator: Dr. Todd S. Woodward, Dr. Jennifer Coelho and Dr. Evelyn Stewart

Are you interested in psychological research?

Researchers at the University of British Columbia and BC Children's Hospital Research Institute are studying the thinking processes underlying mental health problems, including eating disorders, psychosis and obsessive-compulsive disorder, and how these processes differ between children and youth with and without mental health conditions.

This research will provide important insights into the thinking processes involved in eating disorders and other psychiatric illness. This knowledge may change how we treat eating disorders, psychosis and OCD in the future.

If you are between the ages of **10 and 24 years**, and has a **history of eating disorder or history of psychosis**, you may be eligible to participate in this study.

You will be asked to complete a variety of tasks, including tests for verbal knowledge, problem-solving, reasoning and decision-making over a 1-hour testing session at BC Children's Hospital.

You will receive a gift card for participating in this study.

Please contact Zainab Naqqash at **604-875-2000 ext. 3068** or email at zainab.naqqash@bcchr.ca if you are interested in finding out more about the research or registering as a participant.

Thank you for your interest in our research, and we look forward to hearing from you!
