**Are you a child/youth with DCD or
do you have a child with DCD?**

**Consider participating in the
DCD Research Database**

What is this study about?

The purpose of the database is to create a profile of children with DCD in BC and to invite families in the database to participate in other studies.

Who can participate?

Participants in the research:

- have a diagnosis of DCD
- are between 4 and 18 years old
- parents/legal guardians can complete the questionnaires in English

What's involved?

Parent/legal guardian will complete brief questionnaires about child's motor skills, family demographics, and child's diagnosis.

What are the benefits of participating?

Participation in the database will help us to learn more about children with DCD. Families may be invited to participate in other research and intervention studies.
